

# METHANE EMISSION REDUCTION PROGRAM

- Pine Cliff Energy Ltd. is proud to have been an early action leader in reducing methane emissions from our operations. Starting in March 2018, we worked with a third party to inventory all of our pneumatic devices and pumps, and replace all eligible high-bleed pneumatic controllers with newer low or no-bleed alternatives.
- To date 451 high-bleed controllers have been replaced, retrofitted or removed in our operations.
- Through this initiative, we have reduced our annual GHG emissions by 29,160 tonnes CO<sub>2</sub>e, which is equivalent to taking 6,190 cars off the road on a permanent basis each year.
